Resume

Fullstack Developer with proven experience in Frontend and personal projects in Backend. Strong ability to work in team environments with experience in Agile methodologies. I am detail-oriented and results-driven, currently pursuing a degree in Cybersecurity at Universidad de Palermo. Skilled in Frontend development and educated on full stack and object-oriented programming. Experienced in both greenfield projects and ongoing maintenance.

Stack

- **Frontend:** JavaScript, React, Angular, HTML, CSS and responsive design

- **State Management:** React Hook Form y Redux

- **Tools:** Git, GitHub, Figma, Agile/Scrum methodologies, APIs REST integration

- **Backend:** Node.js, NestJS, MySQL and object-oriented programming knowledge

- **IA:** Cursor and Gemini CLI.

- **Otros:** Bilingual, effective communication and great team work

Work experience

Full Stack Freelance Development | Remote | Jan 2022 – Present

- Maintained and built HTML and CSS markup, developing interfaces with React and Nextjs.

- Implemented forms, managed state with Redux, and validated input and output data through schemas.

- Consumed and efficiently managed data from REST APIs and databases.

- Handled tasks with Jira, following Scrum and Kanban. Used Figma for design guidelines obtaining pixel perfect web site interfaces.

- Used Git for version control, managing pull requests, and automating processes with tools.

Freelance with Hogarth | Website production and localization | Buenos Aires, Argentina | Sept. 2025

- Contributed to the redesign and localization of every web interface, ensuring great quality and responsive compatibility.
- I followed defined workflows to deliver meticulous work, achieving visual and technical precision.
- Collaborated in a team environment using SVN for version control and change tracking.

Contractor Experience at Kopius | Frontend Development - Integration Project for U.S. Financial Agents – Buenos Aires, Argentina | Sept. 2024

- Built a React interface for a credit management platform, implementing validated forms and global state management with Redux.
- Integrated real-time data by implementing API calls in the frontend, reflecting updated states in the UI.
- Developed HTML layouts based on Figma respecting all proportions and style details.
- Used Git for version control, including pull requests, rebases, and collaborative workflows.

Highlighted Projects

Investment Dashboard (Full-Stack) | Personal Project

- Built a modular application to simulate compound interest and financial goals using React, Node.js, NestJS, and MongoDB.
- I focused mostly on code modularization following the MVC design pattern to ensure scalability.
- Added enhanced validation for improved error logging and tracking.

Government Portal Layout– Freelance Contract

- Developed interfaces based on design specifications, ensuring visual consistency and HTML standards.
- Applied internal design libraries and Bootstrap.
